ASHABHUMI ONGOING JOURNEY

Organic farming training in Aarukharka

Learning, sharing and growing with our community through Organic farming training

With participants from various backgrounds, this journey became more than just a training. It turned into a shared experience of learning, unlearning, and reconnecting with the soil. From understanding the foundations of organic farming to exploring sustainable agroforestry practices, every session was rooted in the belief that true growth begins with nature.

Together, we dug deep into urgent issues—soil degradation, climate change, and chemical dependency and explored time-tested, earth-friendly solutions grounded in local wisdom and modern insight.

OUR RECENT ACTIVITIES

1

Organic farming training in the community

field visit and learning from other farms

soil management and composting

Ashabhum Nepal has officially launched the first and second phase of its five-day each community training on organic farming

A total of 27 participants from diverse age groups came together to learn, engage, and share valuable insights. The training covered a wide range of topics related to organic farming and agroforestry—exploring their principles, sustainable practices, and the long-term benefits they offer to both people and the planet.

Our mission is to stand with farmers and support them in tackling today's urgent challenges, including soil degradation, excessive chemical use, and the impacts of climate change. Through this initiative, we aim to revive traditional organic farming wisdom and promote sustainable agricultural practices that respect nature and nourish communities.

Ashabhum Nepal is deeply committed to restoring the pride in farming and uplifting the hardworking farmers who continue to struggle to meet their basic needs despite their tireless efforts.

Filling polybags to transplant fruits trees

Ashabhumii Nepal Nursery

Ashabhumii Nepal has successfully transplanted over 6,500 fruit tree seedlings into poly bags at our nursery. These seedlings will be ready for distribution in the coming year, bringing us one step closer to turning our vision into reality, supporting farmers, and transforming barren land into thriving, productive spaces. We are happy that the saplings are growing well.
