

## ASHABHUMI ONGOING JOURNEY

### IN FIELDS, WE TRUST: FARMERS MAKE IT ALL POSSIBLE

Farming is more than just a job; it's a lifestyle that connects us to the origins of civilization. It reflects our ancient bond with the land and our reliance on it for survival. Farming is not only a source of food, but also a force that shapes societies, economies, and cultures. It supports livelihoods, maintains traditions, and creates a deep connection to nature. We all need food to survive and we all need farmers more than any professional. Modern farming has not just increased the production but also increased chemicals which directly affect our health.

Organic farming is the way out, to go back the nature way itself.

**We stands with farmers, we farm and grow together.**

# GROWING COMMUNITIES WITH ASHABHUMI

1

## Exploring Organic farms for learning and collaboration by Ashabhumi Founder

Recently, Ashabhumi founder, Krishna, embarked on an enriching journey across various organic farms spanning Kathmandu, Kavrepalanchok, Sindupalchok, Surkhet, and Kalikot. This insightful visit aimed to delve into the relationship between these farms and the communities they serve.

At Ashabhumi Nepal, our mission revolves around empowering remote communities and serving farmers. Hence, understanding the diverse experiences, successes, and challenges of these farms was necessary.

The relationship between some farms and the local community was very effective. Through initiatives like homestays, these farms not only attract tourists but also generate employment opportunities for locals. Moreover, several farms focus on producing organic food and fruits while providing essential knowledge and support to farmers, aiding them in branding their products. We discussed collaboration with Ashabhumi and knowledge exchange.

Inspired by these impactful models, Ashabhumi is committed to incorporating similar strategies as we expand our reach.

By continuously evolving and optimising our approach, we aim to maximize our positive impact on communities and foster sustainable development.

**Join us on this journey towards a greener, more inclusive future with Ashabhumi Nepal.**

### From Nursery to Agroforestry

Ashabhumi Nepal has established a Greenhouse Nursery aimed at cultivating various native fruits in the region. After conducting thorough land assessments with agricultural consultants, we have identified suitable species for cultivation in the community area.

#### Fruit Tree Cultivation

The Greenhouse Nursery will specialize in producing a variety of fruit trees including lemon, orange, avocado, coffee, ginger, broom grass, Ipil (Leucaena leucocephala), and Bauhinia purpurea. These trees are carefully selected to thrive in the local environment and will be distributed to the community.

#### Sustainable Distribution

Part of our initiative involves distributing these fruit trees to community members, with some provided free of charge and others available at a minimal production cost.

#### Moving Towards Agroforestry

As we progress, our goal is to transition from nursery cultivation to agroforestry models on barren lands. Our team of experts will provide support and guidance to community members, empowering them to implement sustainable cultivation practices and enhance land productivity.

#### Community Support and Collaboration

We are excited about the potential of this initiative to not only improve local biodiversity but also to support community livelihoods. By working together and using our collective expertise, we can create positive impacts for both people and the environment
